

HoodBoy Entertainment

LNKUP LABEL MANAGEMENT PLATFORM

CLIENT USER MANUAL

Complete Platform User & Workflow Guide

A practical reference for every role, dashboard, module, workflow, status, form, and day-to-day operating procedure in the platform.

About this manual

This manual documents the client-facing behavior of the current HoodBoy Entertainment Lnkup Label Management Platform. It is written for administrators, managers, artists, finance staff, marketing staff, and operational users.

Document	Client User & Workflow Manual	Version	1.2
System	Lnkup Label Management Platform	Review date	15 September 2026
Audience	HoodBoy Entertainment staff, artists, finance and marketing users, system administrators, and approved client stakeholders		
Source of truth	Current application routes, page behavior, authorization policy, data models, validations, and file-handling rules in the supplied web application		

How to read it

Start with Chapters 1-4 for access and navigation. Use Chapters 5-8 for end-to-end operating workflows. Chapters 9-31 are the module-by-module reference. The appendices contain status definitions, troubleshooting, security practices, and current-deployment notes.

Role-dependent interface

The left navigation and available actions change after sign-in. If a button or page described here is not visible, first confirm that the signed-in account has the required role and write permission.

Production responsibility

Records involving money, rights, tax, contracts, approvals, and irreversible deletion should be reviewed by the responsible business owner. The system records operational data; it does not replace legal, accounting, or tax advice.

Conventions

Term	Meaning
Read	View lists, details, dashboards, validation results, and reports.
Write	Create, edit, delete, approve, upload, advance a phase, or record a transaction.
Required field	Usually shown with an asterisk. Saving is prevented if a required or validated value is missing.
Danger action	A delete or other irreversible action. Read the confirmation dialog before proceeding.

Contents

1 Platform overview

The platform centralizes the label's artist roster, catalog creation, releases, rights, legal documents, projects, tasks, campaigns, contacts, finance, royalties, tax dates, analytics, files, and team access.

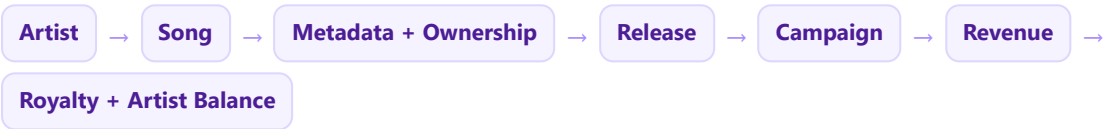

Catalog & rights
Artists, songs, versions, metadata, ownership splits, clearances, signatures, and release readiness.

Operations
Projects, task Kanban, weekly reporting, development plans, scorecards, and show episodes.

Finance & legal
Transactions, budgets, contracts, templates, royalty calculations, balances, payments, and tax deadlines.

Marketing & insights
Campaign plans, content calendars, contacts, performance metrics, dashboards, and CSV reports.

Typical information flow

Projects and tasks can coordinate the work across this lifecycle. The File Manager stores related business assets, while dashboards and analytics summarize the resulting records.

Record-management pattern

- 1 Open a module from the left navigation.
- 2 Use search, filters, tabs, or cards to locate a record.
- 3 Select a record to view details; use the pencil/edit action to change it.
- 4 Complete required fields, save, and confirm the success notification.
- 5 Use delete only after confirming dependencies and retention requirements.

2 Landing page, sign in and sign out

Public landing page

When a signed-out visitor opens the platform root address, the public HoodBoy Entertainment landing page appears. It introduces the Lnkup platform through four capability cards: **One Workspace**, **Release Ready**, **Clear Numbers**, and **Built to Grow**.

- 1 Select a capability card to display its related headline and platform summary.
- 2 Use the previous and next arrow controls to move through the cards. On a desktop keyboard, the left and right arrow keys provide the same control.
- 3 Select **Sign in** in the header or **Enter the platform** in the hero area to open the login page.

The desktop presentation fits inside the browser viewport without page scrolling. On smaller screens, the content stacks vertically, the capability cards can be swiped horizontally, and normal vertical scrolling remains available.

Signed-in root route

An authenticated user who opens the root address is taken into the application and shown the dashboard appropriate to the account role.

Sign in

- 1 Open the platform login page from the landing page or directly.
- 2 Enter the email address assigned to the account.
- 3 Enter the password. Use the eye icon to show or hide it.
- 4 Select **Sign In**. A confirmation screen appears while the correct role dashboard loads.

Select **Home** at the upper left of the login page to return to the public landing page.

First-time access

Administrators create staff accounts and assign roles in Team Management. Artist login credentials are created as part of the artist approval workflow; the authorized manager or administrator must provide the generated temporary credentials securely.

Password recovery and two-factor sign-in

- 1 Select **Forgot password?**, enter the account email, and submit.
- 2 Open the time-limited link delivered by the configured recovery service. Development/demo deployments can load the one-time code directly.
- 3 Enter and confirm a new password of at least eight characters.
- 4 If two-factor authentication is enabled, complete password sign-in with the current six-digit authenticator code.

Keep me signed in stores the session persistently in that browser. Leave it clear to use session storage, which ends when the browser session closes.

Login errors

Message or symptom	Meaning / action
Invalid credentials	Re-enter the email and password exactly. Confirm Caps Lock and keyboard language.
Account is deactivated	Ask an administrator to reactivate the member in Team Management.
Returned to login during work	The stored session may be expired or stale. Sign in again. Unsaved form content may need to be re-entered.

Sign out

Select the user avatar at the top right and choose **Sign out**, or select **Sign Out** at the bottom of the sidebar. Signing out clears locally stored account, navigation, access, and session details.

Shared devices

Leave **Keep me signed in** clear and always sign out after use. Signing out clears both persistent and session-scoped application credentials.

3 Navigation and shared controls

Control	What it does
Left sidebar	Shows only the pages assigned to the signed-in role, grouped into Overview, Catalog, Operations, Finance, Insights, and Account.
Mobile menu	On smaller screens, select the menu icon to open the sidebar; select the shaded background or X to close it.
Page title	The top bar identifies the current page.
Workspace search	Searches accessible artists, songs, releases, projects, contracts, contacts, tasks, and campaigns. Select a result to open its module. Press Ctrl/Command-K to focus it.
Notification bell	Shows unread count, the latest 20 notifications, priority, relative time, mark-read, mark-all-read, delete, and linked navigation.
Theme button	Switches between light and dark mode and remembers the selection on that browser.
User menu	Displays name, email, role, Profile, Settings, and Sign out.
Toast messages	Short success or error messages appear at the upper right after actions.
Confirmation dialog	Requires confirmation before destructive actions such as deleting records.

Common list controls

Search narrows records by keywords. **Filter** limits status, type, role, year, artist, or period. **View** opens detail. **Edit** opens a populated form. **Delete** removes the record after confirmation. Many dashboards use clickable cards that lead to the relevant module.

Search scope

Workspace search respects the signed-in role and returns only accessible record categories. Use a module's own search and filters for detailed narrowing.

4 Roles and permissions

RW = read and write; **R** = read only; dash = no authorized module access. Administrator has full system access.

Module	Admin	Manager	Artist	Finance	Marketing
Dashboard	RW	RW	RW	RW	RW
Artists	RW	RW	-	R	R
Songs / Releases	RW	RW	Own views	-/R release	R
The Lnk Up	RW	RW	-	-	-
Projects / Development / Tasks	RW	RW	Own tasks R	Own tasks R	Own tasks R
Contracts	RW	R	-	R	-
Contract Templates	RW	-	-	RW	-
Finance / Budgets / Royalties / Balances / Tax	RW	-	Own royalties R	RW	-
Analytics	R	R	-	R	R
Per-Song Analytics	RW	-	-	RW	R
Campaigns / Contacts	RW	RW	-	-	RW
Ownership	RW	R	-	-	-
Files / Metadata	RW	RW	-	-	-
Weekly Reports	RW	RW	-	-	-
Team / Personal Settings	RW	Settings	Settings	Settings	Settings

Artist music, release, royalty, and profile pages use role-scoped dashboard endpoints; artists do not receive unrestricted access to the staff catalog or finance ledgers. Task participants can read and comment on their assigned tasks but cannot create, reassign, or delete tasks.

Role summaries

- **Administrator:** full system, user, configuration, operational, financial, and approval control.
- **Manager:** roster and day-to-day catalog/operations management plus campaigns, contacts, files, metadata, and analytics.
- **Artist:** personal dashboard and own-facing music, release, royalty, task, and profile views.
- **Finance:** finance, budgets, royalties, artist balances, tax calendar, templates, and read-only related information.
- **Marketing:** campaigns, contacts, analytics, per-song analytics, and read-only artists/songs/releases.

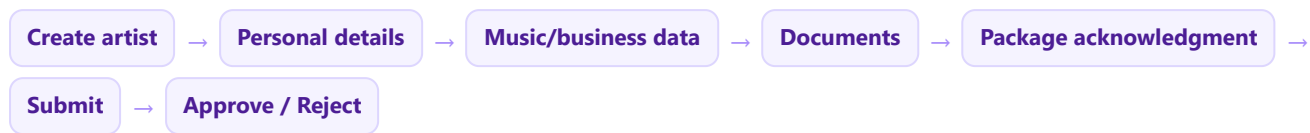

5 Role dashboards

Dashboard	Main information and intended use
Administrator / Executive	Label performance overview; financial breakdown; task distribution; artist roster; approval queue; project momentum; items needing attention; release schedule; campaign runway; recent activity; contract alerts; portfolio snapshot. Use it to triage approvals, deadlines, financial position, and risk.
Manager	Managed artists, projects, tasks, upcoming releases, overdue work, priorities, and operational progress. Use it for daily production and A&R coordination.
Artist	Artist identity and performance snapshot plus My Songs, My Releases, My Tasks, and Royalty History. Use it as the personal work and performance home page.
Finance	Income, expenses, profit, payment status, cash-flow indicators, artist liabilities, and finance shortcuts. Use it for reconciliation and payment planning.
Marketing	Active campaigns, budgets/spend, engagement, content progress, results, and marketing workload. Use it to spot pacing or overspend issues.

Recommended daily routine

- 1 Read high-priority notifications.
- 2 Review overdue, approval, release, contract, and budget warnings on the dashboard.
- 3 Open the relevant module and update the source record.
- 4 Confirm changes appear in the next refreshed summary.
- 5 Use Tasks and Weekly Report to record ownership and follow-through.

6 Artist onboarding workflow

- 1 Administrator or Manager opens **Artists > Add Artist**.
- 2 Complete required legal name, stage name, email, phone, and primary genre. Add contact, biography, social and image information.
- 3 Save the first step. The artist record must exist before profile/cover images and documents can be attached.
- 4 Add music links, previous releases, existing catalog ownership, PRO/publisher, payment, tax, contract dates, manager, royalty rate, and notes as applicable.
- 5 Upload every required onboarding document and download/deliver the onboarding package.
- 6 Confirm that the artist received and reviewed the package. Add onboarding notes and select **Submit for Approval**.
- 7 An Administrator or Manager opens the profile, reviews all data/documents, and selects **Approve** or **Reject**. Rejection should include a clear reason.
- 8 If rejected, reopen onboarding, correct the record, replace documents if needed, and resubmit.

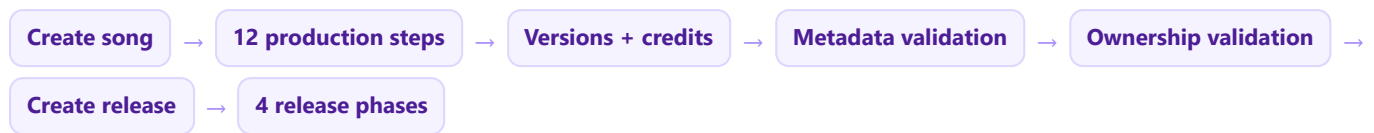

Required document set

Artist agreement, tax form, NDA, image release, payment instructions, code of conduct, social media expectations, recording delivery requirements, and existing contract where applicable. Document status can be pending, approved, or rejected.

Approval gate

Submission is blocked until required onboarding documents are present and the package acknowledgment is confirmed.

7 Music-to-release workflow

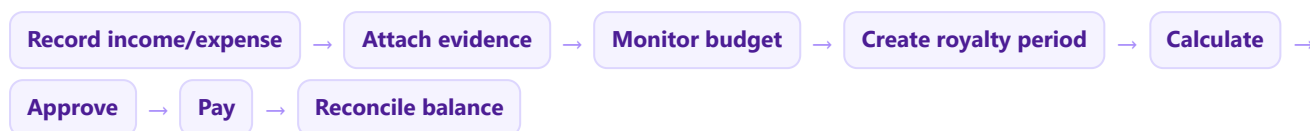

- 1 Create the song with artist, status, priority, production information, credits, and beat information.
- 2 Move each production step through pending, in progress, completed, or blocked; document blockers in notes.
- 3 Upload alternate deliverables such as explicit/clean masters, instrumental, performance, a cappella, radio edit, stems, high-quality WAV, and reference MP3.
- 4 Create metadata, complete identifiers/rights/technical/platform fields, and run validation. Resolve every listed error.
- 5 Create the ownership record. Enter all writers, publishers, producer, featured artists, beat license, samples, and required signatures. Ensure the combined percentage equals 100%.
- 6 Validate ownership; obtain signatures and clear samples. Approve ownership only when release-ready.
- 7 Create the release with at least one song, date, type, status, platform delivery information, and readiness flags.
- 8 Complete the current phase checklist, then advance: Preparation → Distribution → Marketing → Post-Release → Completed.

Do not force a phase casually

The phase-advance control may offer a forced advance when checklist requirements are incomplete. Use it only with documented approval because it bypasses the intended operational gate.

8 Finance-to-royalty workflow

- 1 Finance user records income and expenses with dates, category, counterparty, links to artist/project/release, payment status, method, invoice/receipt, account reference, and tax classification.
- 2 Maintain budgets and line items. Compare budgeted against spent; investigate overruns.
- 3 Create the royalty period for an artist and optionally link the release, song, contract, ownership, finance transactions, and supporting files.
- 4 Enter gross income by source, fees, approved deductions, recoupable expense position, and split percentages. Source income must equal gross income; artist plus label must equal 100%.
- 5 Select **Calculate**. Review net income, shares, recoupment, producer/featured allocations, and remaining balance.
- 6 Approve only after the underlying contract, ownership, source reports, deductions, and bank/payment information have been checked.
- 7 Generate the statement record, issue payment, and record amount, date, method, reference, and notes. The platform updates paid and remaining amounts.
- 8 Update the artist balance period and add supporting income, expense, advance, payment, or adjustment transactions; reconcile and approve under the label's financial controls.

Separation of duties

Where staffing permits, the person entering a calculation should not be the only person approving and paying it. Keep source evidence in the File Manager.

9. Artists and artist profiles

Access: Administrator RW; Manager RW; Finance R; Marketing R

Roster page

Search artists, filter by lifecycle/onboarding state, review roster and onboarding statistics, open a profile, continue onboarding, create a new artist, or delete a record if authorized. Profile cards summarize identity, genre, contact, status, streams/revenue, and onboarding progress.

Artist record fields

Group	Fields
Identity	Profile photo, cover photo, legal name*, artist/stage name*, email*, phone*, date of birth.
Contact	Street, city, state, ZIP, country; emergency contact name, relationship, phone, email.
Profile	Biography; Instagram, TikTok, YouTube, Spotify, Twitter/X.
Music	Primary genre*, multiple music links, previous releases, existing catalog ownership.
Business	PRO affiliation; publisher name/contact; payment method, bank/account/routing or PayPal; tax ID, tax form type, filing status.
Relationship	Artist status, contract start/end, manager, royalty rate, onboarding notes.

Profile actions

View biography, social links, onboarding details/documents, performance, contact, business/payment/tax data, contract relationship, and dates. Authorized users can change images, continue onboarding, approve/reject pending onboarding, or delete the artist.

Artist status: active, inactive, on hold, upcoming. **Onboarding:** not started, in progress, pending approval, approved, rejected.

Delete carefully

Before deleting an artist, check linked songs, releases, projects, contracts, royalties, balances, campaigns, development plans, files, and analytics. Deletion is presented as irreversible.

10. Music Catalog

Access: Administrator RW; Manager RW; Marketing R; Artist own music R

Create or edit a song

Enter title*, artist*, album, genre, status, priority, release date, duration, producer, writer, ISRC, notes, credits, and beat/license information. Credit roles include songwriter, composer, producer, engineer, mixer, masterer, featured artist, vocalist, musician, and other.

Statuses: demo, in production, mixing, mastering, awaiting approval, approved, released, shelved. **Priorities:** low, medium, high, critical.

Production workflow

#	Step	#	Step
1	Beat Selected	7	Editing Completed
2	Beat Ownership Verified	8	Mixing Completed
3	Song Concept Approved	9	Mastering Completed
4	Lyrics Written	10	Alternate Versions Created
5	Demo Recorded	11	Files Backed Up
6	Final Vocals Recorded	12	Credits Confirmed

Each step supports status (pending, in progress, completed, blocked) and notes. Completion records time and user. New songs receive this workflow automatically.

Song versions

Upload, edit notes/type, and delete: explicit master, clean master, instrumental, performance version, a cappella, radio edit, stems, WAV high quality, and reference MP3. The upload records file name, size, format, date, and uploader.

Best practice

Do not mark Credits Confirmed or Files Backed Up until the matching ownership and File Manager records have been checked.

11. Metadata Manager

Access: Administrator RW; Manager RW

The Metadata Manager creates one metadata record per song, displays validity statistics, supports individual/bulk validation, editing, deletion, and export.

Group	Fields
Core	Song, title, version, artist, album, genre/subgenre, mood, BPM, musical key, language, label, release date, lyrics, contact name/email/phone.
Identifiers & rights	ISRC, UPC, ISWC, copyright, owner, year, publisher, PRO affiliation, writer split, publisher entries with percentage/PRO/IPI.
Platforms	Spotify URI/ID, Apple Music ID/URI, YouTube Music, Amazon Music, Tidal ID/URL, Deezer, SoundCloud, pre-save link.
Distribution/technical	Distribution date/platform, pre-save date, audio format, sample rate, bit depth, explicit flag.
Credits	Name, role, percentage for writers, composers, producers, engineers, mixer/masterer, featured artists, vocalists, musicians, other.

Validation rules

- Required: title, version, artist, genre, language, label, ISRC, UPC, copyright owner, release date, lyrics, BPM, key, and contact email.
- ISRC must normalize to 12 valid characters; UPC must contain 12 or 13 digits.
- At least one writer/composer and at least one producer are required.
- Writer percentages must total 100%; at least one publisher (including self-published) and publisher percentages totaling 100% are required.

Validation states: valid, incomplete, needs review, unvalidated. Export records the format and time when supported.

12. Ownership Tracker

Access: Administrator RW; Manager R

Use Ownership Tracker to verify rights before distribution. Dashboard figures show total, complete/incomplete, approved/pending, with samples, release-ready, and average percentage.

Area	Information
Master	Song* and master owner.
Composition	Writers (name, percentage, songwriter/composer/lyricist/arranger); publishers (name, percentage, admin/co-publishing/sub-publishing/mechanical).
Other participants	Producer and percentage; featured artists and percentages.
Beat license	Exclusive/non-exclusive/lease/work-for-hire/none, producer, cost, terms, dates, license number, territory, usage limit, document URL.
Samples	Title, original artist, owner, percentage, clearance status/document, notes.
Signatures	Party, role, pending/signed status, document URL, signed date, notes.
Registration	Copyright status/number, PRO status/name/IPI, distribution status, notes.

Validate and approve

- 1 Open or create the ownership record for the song.
- 2 Add every participant and clearance; save.
- 3 Run validation and correct every displayed error.
- 4 Confirm total allocation equals exactly 100%, all required signatures are signed, and samples are cleared or not applicable.
- 5 Administrator selects approval only when release-ready.

Distribution states: ready, pending metadata, pending approval, distributed, on hold. **Copyright:** registered, pending, not registered, disputed.

13. Releases

Access: Administrator RW; Manager RW; Finance R; Marketing R; Artist own releases R

Release fields

Title*, artist*, one or more songs*, project, release date*, type, status, current phase, ownership/master/artwork/metadata readiness flags, distribution platforms and links, marketing budget, cover art URL, UPC, assigned user, priority, genre, language, explicit flag, pre-save link, press release URL, and notes.

Types: album, EP, single, mixtape, compilation. **Statuses:** scheduled, in preparation, submitted, approved, released, delayed, cancelled.

Phase operation

Open release detail to update each current-phase checklist item. Checklist statuses are pending, in progress, completed, blocked, or skipped and can include assignee, due date, completion time, notes, and order. Select **Advance Phase** after the phase requirements are satisfied.

Platform delivery

Add one row per distributor/store. Record platform name, pending/submitted/live/rejected state, and store link. Submitted and live timestamps are tracked when status changes.

Minimum release content

The system rejects a release with no songs. Before approval, confirm ownership, master, artwork, and metadata flags against the underlying records rather than treating them as stand-alone checkboxes.

14. Projects

Access: Administrator RW; Manager RW

Projects group songs and operational work around an album, EP, single, mixtape, or compilation. The project list supports status/priority tracking and create, edit, and delete actions.

Field	Use
Name* / Type*	Business-facing project name and release format.
Artist*	Primary artist responsible for the project.
Status / Priority	Not started, in progress, waiting approval, completed, delayed, cancelled; low, medium, high, critical.
Dates	Start date and intended release date.
Budget / Spent	High-level project values. Use Finance Budgets for detailed financial control.
Assigned To	Responsible team member.
Completion	0-100% manual completion percentage.
Description / Notes	Scope, context, decisions, blockers, and handoff information.

Recommended workflow

- 1 Create the project before assigning its operational tasks.
- 2 Link songs and the responsible artist/user.
- 3 Set dates, budget, priority, and scope.
- 4 Update status, spent, and completion consistently during review meetings.
- 5 Move to waiting approval when the deliverable is ready; mark completed only after final acceptance.

15. Tasks & Responsibilities

Access: Administrator RW; Manager RW; Artist/Finance/Marketing assigned tasks R + comments

The task board is a Kanban workflow with summary statistics and team-performance information. Columns are Not Started, In Progress, Waiting Approval, Blocked, Delayed, and Completed.

Create a task

Complete title*, description, assignee, related project, related artist, deadline*, status, priority, category, deliverable, tags, and notes. Categories: production, marketing, finance, legal, distribution, and general.

Operate the board

- 1 Create the task with a specific deliverable and accountable assignee.
- 2 Open a card for full details or change its status from the detail view.
- 3 Move it to In Progress only when work has begun.
- 4 Use Blocked with a note describing the blocker and needed owner; use Delayed when the committed date is missed or formally moved.
- 5 Use Waiting Approval for submitted work and Completed only after acceptance. Completion time is recorded automatically.

Statistics include total, by status, by priority, overdue, and due this week. Team performance includes completed, delayed, in-progress, critical, on-time, completion rate, and on-time rate.

Task hygiene

Use one clear outcome per task. A task title should be understandable without opening it; the deliverable field should define what “done” means.

16. Weekly Report

Access: Administrator RW; Manager RW (route available; see deployment notes)

The platform creates/returns the current reporting week and provides a structured check-in with a completion meter. The History tab lists prior reports, author, date range, completeness, and delete action.

Seven reporting prompts

1. What was completed?
2. What is still open?
3. What is blocked?
4. What needs approval?
5. What is due this week?
6. What is the biggest risk?
7. Who owns next action?

An Additional Notes area captures context that does not fit the seven prompts. All fields are recommended; the completion meter is the percentage of the seven prompts containing text.

- 1 Open the current week.
- 2 Write concise bullets or short paragraphs under each prompt.
- 3 Name the owner and the exact next action.
- 4 Select **Save Report** and confirm the success message.
- 5 Use History for review; delete only in the case of a duplicate or approved retention action.

17. Artist Development & Scorecards

Access: Administrator RW; Manager RW

Create a development plan for an artist, define focus areas and goals, and record monthly scorecards. Dashboard views summarize plan counts, artists tracked, skill averages, latest result per artist, and monthly trends.

Development plan

Artist*, title*, description, status (active, completed, paused, archived), focus areas, notes, and goals. Goals can include category, title, description, target date, progress 0-100%, completion, notes, and milestones with due date/completion.

Scorecard

Skill ratings (1-10)	Activity/metric scores
Music quality; songwriting; vocal ability; stage performance; branding; visual identity; social media consistency; interview skills; fan engagement; professional behavior.	Songs completed; content posted; engagement growth; rehearsals completed; deadlines met; revenue generated; audience growth; team cooperation (1-10).

Add month/year, goals, improvements, comments, and overall score. The artist detail page compares scorecards, calculates averages and growth, and shows current/latest performance.

Fair evaluation

Score against agreed evidence and use comments to explain changes. Keep qualitative coaching notes separate from numerical metrics where possible.

18. The Lnk Up

Access: Administrator RW; Manager RW

Tracks episodes for The Lnk Up TV/show property. Statistics and an upcoming-episodes panel support production planning.

Field	Values / purpose
Episode identity	Title*, season, episode number, featured artist, comma-separated guests.
Status	Planned, casting, recorded, editing, scheduled, aired, cancelled.
Distribution	Air date; YouTube, TV, streaming, podcast, live, or other platform.
Editorial	Description/synopsis, thumbnail URL, tags, internal production notes, featured flag.
Performance	Views, likes, and stored watch time.

Search by title, artist, or tag. Create/edit the episode as production advances; mark Aired only after publication/broadcast. Delete after confirmation.

19. Campaign Manager

Access: Administrator RW; Manager RW; Marketing RW

Campaign Manager combines campaign strategy, budget pacing, content scheduling, A/B advertising tests, and performance reporting.

Group	Fields
Basics	Name*, type, artist, project, release, status, start/end dates*, assigned user, tags, notes.
Strategy	Objective, target audience, main story, goals, content themes, calls to action, release date, platforms, content categories, content target.
Budget/results	Budget, spent, reach, impressions, clicks, conversions, engagement, attributed revenue. Profit, CPC, cost per conversion, and ROI are calculated.
Control	Approval required/notes, budget alert threshold (default 80%), content progress based on published items versus target.

Campaign types: social media, email, radio, PR, influencer, paid ads, event, content, sync, brand, other. **Status:** planned, active, paused, completed, cancelled.

Content items

Add/edit/delete title, platform, content type, category, scheduled/published date, draft/scheduled/published/cancelled status, caption, media URL, link, impressions, clicks, likes, shares, comments, and conversions.

Advertising tests

Create test name, platform, audience, creative variation, call to action, budget/spend, impressions/clicks/conversions, result, and planned/running/completed/stopped state.

Budget alert

The alert activates when spent as a percentage of budget reaches the configured threshold. A zero budget cannot produce a useful pacing percentage.

20. Contacts

Access: Administrator RW; Manager RW; Marketing RW

Contacts is the relationship-management area for industry partners. Search/filter the directory, favorite important contacts, open detailed relationship history, create reminders, and log interactions.

Area	Fields
Identity	Name*, job role, email, phone, company, required category, subcategory, source.
Relationship	New/contacted/warm/strong/inactive/archived, strength 0-10, genre preference, follow-up date, what was sent, response.
Address/social	Full postal address; Instagram, LinkedIn, Twitter/X, TikTok, YouTube, website.
Organization	Related artists/contracts, assigned user, tags, notes, favorite.

Categories include A&R, manager, lawyer, accountant, producer, engineer, publicist, radio promoter, distribution, streaming, sync, brand, media, studio, touring, DJ, playlist curator, journalist, blogger, podcaster, promoter, venue owner, photographer, videographer, sync agent, music supervisor, brand representative, and other.

Interactions and reminders

Interactions record call/email/meeting/message/event/other, subject, date, notes, outcome, material sent, response, and follow-up. Reminders record title*, date*, follow-up/birthday/contract renewal/meeting/payment/other type, notes, and completion. Use Upcoming Reminders to plan outreach.

21. Contracts

Access: Administrator RW; Manager R; Finance R

Contracts stores commercial terms, files, dates, renewal and option information. The page includes contract statistics and expiring/expired/renewal-due alerts.

Group	Fields
Identity	Title*, artist, type, status, parties (name/role/entity), tags.
Dates	Signed, start*, end*, renewal date/deadline, notice days, auto-renew.
Commercial	Value, royalty %, ownership terms, full terms, notes, managing user.
Recoupment	None/recoupable/partially recoupable/cross-collateralized; advance amount/paid, recoupment rate, notes.
Payment	Advance, advance-paid, monthly/quarterly/semiannual/annual royalty frequency, minimum guarantee, notes.
Options	Label, duration months, exercise deadline, exercised flag/time, notes.
Evidence	Uploaded contract file and file name.

Types: artist/producer agreement, beat license, split sheet, featured artist, work for hire, video/photo release, contractor, NDA, sync, merchandise, recording, publishing, distribution, management, licensing, endorsement.

Status: draft, pending signature, active, expired, terminated, renewed.

Date and percentage validation

End date cannot be before start date, and royalty percentage must be 0-100. Treat the uploaded signed document as the authoritative executed copy.

22. Contract Templates

Access: Administrator RW; Finance RW

Create, edit, activate/deactivate, preview/use, and delete reusable legal templates. Track usage count and last-used time where populated.

Group	Fields
Template	Name*, type*, description, body content, active flag, tags.
Clauses	Title*, body*, standard/optional/conditional category, order. Add, edit, reorder through order value, or remove.
Default terms	Duration months, renewal term, royalty rate, advance, recoupment type, notes.

Template types cover artist and producer agreements, beat license, split sheet, featured artist, work for hire, video/photo releases, contractor, NDA, sync license, and merchandise.

Legal review required

A template is a starting point, not automatically an executed agreement. Confirm current law, parties, deal terms, version, and authorized signatures before use.

23. Finance and Budgets

Access: Administrator RW; Finance RW

Finance Overview

View summary totals, cash flow, category breakdowns, charts, and transaction history. Filter by year, type, status, category, artist, project/release, date, or search as available. Create, edit, and delete transactions.

Transaction fields	Details
Core	Income/expense*, category*, subcategory, positive amount*, description, date.
Allocation	Artist, project, release, department, counterparty.
Payment	Invoice number, method, pending/paid/overdue/cancelled/partial status, due date, paid date.
Documents/account	Receipt upload, invoice upload, account name and last four digits.
Classification	Tax-deductible, tags, notes, recurring flag and weekly/monthly/quarterly/annual frequency.

Income categories include streaming/royalty/publishing/mechanical/performance income, sync, merchandise, touring/live, partnerships/sponsorship, digital/physical sales, advances, beat sales, studio services, shows, features, YouTube, direct fan sales, and other. Expenses include production, recording, mixing/mastering, marketing, distribution, legal, studio, equipment, salaries/contractors, touring/travel, office, software, insurance, taxes, artist advances, consulting, and other.

Budgets

Create a budget with name*, year*, quarter, total, artist/project/release, department, draft/approved/active/closed status, and notes. Add line items with category*, label*, budgeted amount*, spent, and notes. When items exist, total budget is recalculated as the sum of their budgeted amounts. Values cannot be negative. Use Budget vs Actual to review variance.

24. Royalties

Access: Administrator RW; Finance RW; Artist own statements R

The royalty ledger manages an artist/period from draft through calculation, approval, and payment. Search/filter entries, open detail, calculate, generate a statement record, approve, record payments, edit, or delete according to role.

Group	Fields and rules
Scope	Artist*, period*, start/end*, optional release, song, contract, ownership, finance transactions, supporting files.
Income	Gross income and streaming, publishing, mechanical, performance, sync, merchandise, other. Non-zero source total must equal gross.
Deductions	Distributor fees; itemized approved deductions with description, amount, and recoupable/non-recoupable/tax/other category.
Recoupment	Recoupable expenses, previously recouped, recouped this period, remaining recoupable.
Splits	Artist + label must equal 100%; producer + featured artist cannot exceed artist percentage.
Calculated	Net income, artist gross/net share, label share, producer/featured royalty, remaining balance.
Payments	Amount*, date*, method, reference, notes; total paid and remaining balance are tracked.

Status: draft, calculated, approved, paid, disputed. Period end must be on/after period start.

Safe processing sequence

- 1 Create and link source records.
- 2 Enter income, deductions, recoupment, and splits.
- 3 Calculate and independently review.
- 4 Resolve disputes before approval.
- 5 Approve and generate the statement.
- 6 Open the statement and select **Print / PDF**; use the browser print dialog to print or save a PDF.
- 7 Pay and immediately record payment details.

25. Artist Balances

Access: Administrator RW; Finance RW

Artist Balances gives a period-based balance view and transaction history. Search artists, create a balance record, open details, add a transaction, and delete after confirmation.

Balance data includes artist*, period*, period start/end*, opening balance, income, expenses, advances, royalty payments, closing balance, notes, and draft/reconciled/approved status. The current interface may present summary names such as current balance, total earned, total paid, total advances, and advance remaining depending on loaded data.

Add transaction

Select income, expense, advance, payment, or adjustment; enter a non-zero amount, required description, reference, date, and notes. The interface indicates that negative amounts may be used for debit-style adjustments. Check the updated closing balance and history after saving.

Reconciliation

Do not use an adjustment to hide an unexplained difference. Link it to a reference and explain the business reason in notes.

26. Tax Calendar

Access: Administrator RW; Finance RW

Track filing and payment obligations in calendar/list views, year filters, summary cards, and upcoming/overdue groupings. Create, edit, mark complete, extend/update, or delete events.

Field	Purpose
Title* / Type*	Filing, payment, estimated, extension, or other.
Description / Notes	Requirement, jurisdiction, preparation state, and evidence location.
Due date* / Amount	Deadline and expected/paid amount.
Owner	Assigned user.
Period	Year* and optional quarter.
Recurrence	Recurring flag and monthly/quarterly/annual pattern.
Completion	Completed flag and completion timestamp.

The page-level display derives practical states such as upcoming, completed, overdue, and extended. A date passing does not complete an obligation; record completion only after filing/payment is actually confirmed.

27. Analytics & Performance

Access: Administrator R; Manager R; Finance R; Marketing R

Analytics brings together executive, artist, release, finance, marketing, and operational insights. Use the filter controls for date/artist/release/campaign dimensions available in the selected view.

Available analysis

- Executive overview and KPIs.
- Revenue versus expenses, monthly comparisons, category/artist breakdown, quarterly revenue, and growth.
- Artist rankings, revenue, streams, and performance radar.
- Release status/type and upcoming releases.
- Marketing/campaign results.
- Task completion trend, status distribution, team performance, and overdue work by assignee.

CSV export

- 1 Set the intended filters/year/view.
- 2 Select **Export CSV** (finance report export is wired in the current page).
- 3 Save the downloaded CSV.
- 4 Open in spreadsheet software and confirm filters, date range, and totals before distributing.

Analytics timing

Charts reflect the source records currently stored. Update the source module first; then refresh/reopen analytics if a recent change is not shown.

28. Per-Song Analytics

Access: Administrator RW; Finance RW; Marketing R

Create one analytics entry for a song and reporting period. Search by song, artist, or period; compare totals and changes; edit or delete according to permission.

Area	Metrics
Required scope	Song*, period*, period start*, period end*. Artist is derived/linked.
Platforms	Streams, listeners, saves, playlist additions, revenue, and playlist reach for platform rows.
Aggregate	Total streams, monthly listeners, saves, playlist additions, video views, watch time.
Audience/action	Followers gained, email subscribers, website visits, top countries.
Commercial	Merchandise sales, ticket sales, ad spend, cost per result, revenue, campaign profit/loss.
Growth/context	Streams/listeners/saves growth and notable events/impact captured by the interface.

Use consistent reporting periods and platform definitions. Do not add cumulative lifetime values to a monthly period unless every period uses the same convention.

29. File Manager

Access: Administrator RW; Manager RW

The protected file library supports initialization, folders, structured artist/song trees, upload, preview, download, search, star, move, rename, delete, and verified backup to configured cloud/external destinations.

Initialize and structure

Initialize Storage creates missing root folders: Artists, Releases, Publishing, Accounting, Legal, Merchandise, and Templates.

Artist structure creates the named artist under Artists with Music, Contracts, Photos, Videos, Marketing, and Royalties. Inside an artist's Music folder, **Song structure** creates Recording Session, Beat, Stems, Rough Mixes, Final Masters, Artwork, Lyrics, Split Sheet, Producer Agreement, Metadata Sheet, and Content Assets.

Upload and manage

- 1 Open the destination folder.
- 2 Select/upload up to 20 supported files in a request and add category/tags/record links where offered.
- 3 Confirm each file appears and preview protected image/audio/video/PDF content where the browser supports it.
- 4 Star important files, move or rename when needed, and refresh backups after a move/rename.
- 5 Use Download for an authorized copy. Downloads are counted.

Supported extensions: PDF, DOC/DOCX, TXT, CSV, XLS/XLSX, JPG/JPEG/PNG/WEBP/GIF, MP3/WAV/FLAC/AAC/M4A/AIFF, MP4/MOV/AVI/WEBM, ZIP/RAR/7Z. Executables, HTML, scripts, and SVG are intentionally excluded. Default maximum is 500 MB per file (deployment-configurable).

Backup indicators

Primary, cloud, and external flags are checksum-verified; a file is "healthy" when all three are verified. Cloud/external actions require configured mounted destinations. Moving/rename primary content invalidates old backup flags until re-backed up.

Deletion scope

Deleting a folder can affect nested folders/files. Confirm the exact breadcrumb and business retention requirement before accepting deletion.

30. Team Management

Access: Administrator only

Manage accounts, roles, status, credentials, and department information. Summary cards show total, active, inactive, and department counts. Search by name/email/department and filter by role/status.

Create or edit a member

Enter full name*, unique email*, password* for new accounts (minimum 6 characters), role*, department, and phone. Editing can change identity and role but does not require the current password.

Account controls

Action	Effect
Edit	Updates name, email, role, department, and phone.
Reset Password	Administrator assigns a new password of at least 6 characters.
Deactivate / Activate	Deactivated users are refused at login; the record remains available for administration.
Delete	Permanently removes the account after confirmation. Reassign operational ownership first.

Role changes

A changed role alters navigation and access at the next sign-in. Ask the user to sign out and back in. Apply least privilege: grant only what the person needs.

31. Settings and notifications

Personal settings and notification bell: all roles. Permissions and Team Management: Administrator only.

Profile

Change name, phone, department, and avatar; email and role are displayed but disabled. Images must be under 3 MB in the client and are stored as an image data URI within the server limit. Remove the photo with X and select **Save Changes**.

Security

Change password with current password, new password, and confirmation. To enable two-factor authentication, select the toggle, add the displayed setup key to any standards-based authenticator app, enter the current six-digit code, and verify. Disabling 2FA requires the current password.

Notification preferences

Toggle and save task deadline alerts, release reminders, contract expiry warnings, approval requests, finance reports, and campaign updates. The bell polls unread count every minute and loads the latest 20 items when opened.

Appearance, integrations, permissions

Choose Light, Light Indigo, Light Warm, or Dark plus small/default/large font sizing, then select **Save Changes**; the choice is applied and retained. Platform Integrations stores validated Spotify, Apple Music, and distributor web links for one-click access. It does not claim to import private platform data. Administrators also see the permissions overview and Team Management link.

Notification actions

Select an item to follow its link; use the check to mark one read, **Mark all read** for all, or trash to delete where authorized. High-priority alerts use a red priority dot and are counted in the footer.

32 Operating standards

Data quality

- ☐ Use consistent artist and project naming; search before creating a duplicate.
- ☐ Enter ISO identifiers exactly and use metadata validation before distribution.
- ☐ Keep split totals at 100% and store executed rights documents.
- ☐ Use reporting period names consistently (for example 2026-Q3 or 2026-09).
- ☐ Record money as positive transaction amounts with type/category defining direction, except explicit adjustment workflows that state otherwise.
- ☐ Use references on payments, adjustments, invoices, and deductions.
- ☐ Update status as soon as the business state changes.

Approval and audit discipline

- ☐ Review source files before marking ownership, contract, release, royalty, or balance approved.
- ☐ Explain forced phase advances, overrides, rejections, and adjustments in notes.
- ☐ Do not share passwords or reuse a departing employee's account.
- ☐ Deactivate access promptly, then reassign tasks, projects, contracts, campaigns, and files before deletion.

File naming recommendation

Artist_Project_DocumentType_YYYY-MM-DD_v01.ext , for example AvaRay_NightDrive_SplitSheet_2026-09-10_v02.pdf .
Keep the final executed copy clearly distinguishable from drafts.

Suggested cadence

Cadence	Actions
Daily	Notifications, overdue tasks, release gates, active campaigns, urgent finance/tax items.
Weekly	Weekly Report, project percentages, task ownership, campaign pacing, upcoming releases/contracts.
Monthly	Finance reconciliation, artist balances, royalty inputs, analytics, development scorecards, backup health.
Quarterly	Royalty approval/payment, access review, contract renewals, tax plan, retention and backup restore test.

33 Troubleshooting

Problem	Checks and resolution
Page or action is missing	Confirm role in the user menu and the access matrix. Ask an administrator to correct the role. Sign out/in after a role change.
Save button does nothing / error toast	Check all asterisk fields, dates, numeric totals, and percentages. Scroll the whole modal for errors. Correct the first invalid field and retry once.
Unexpected return to login	Session is expired/stale or authorization failed. Sign in again. If repeated, report the page, action, time, account role, and exact message.
New data not in dashboard/chart	Confirm source save succeeded, refresh the page, verify year/period/filter, and confirm record status/date places it in the metric.
Metadata will not validate	Read every validation error; check ISRC/UPC, BPM/key, contact email, required credits, and writer/publisher totals.
Ownership not release-ready	Check total equals 100%, master owner, beat license, sample clearances, signatures, registration, and distribution state.
Release phase cannot advance	Complete or explicitly skip permitted checklist items and meet readiness gates. Do not force without authorization.
Royalty will not calculate/save	Check dates, source sum equals gross, artist+label = 100%, producer+featured does not exceed artist %, and non-negative controlled fields.
Upload rejected	Confirm permitted extension and true MIME type, size below configured maximum, no more than 20 files, valid destination, and stable connection.
Cloud/external backup unavailable	The server must have a configured, mounted, writable destination. Ask the system administrator; do not treat an unverified flag as a backup.
Dark mode looks inconsistent	Some legacy pages use light-only component styles. Toggle back to light mode for readability and report the affected page.

Support information to capture

- Account email and role (never send the password).
- Page/module and record name/ID if visible.
- Exact action, error text, and local time.
- Browser/device and whether refresh/re-login changed the result.
- Screenshot with sensitive financial, bank, tax, and personal data redacted.

Status glossary

Area	Statuses	Meaning
Artist	Upcoming, active, on hold, inactive	Commercial/roster lifecycle.
Onboarding	Not started, in progress, pending approval, approved, rejected	Intake and review lifecycle.
Song	Demo, in production, mixing, mastering, awaiting approval, approved, released, shelved	Recording lifecycle.
Production step	Pending, in progress, completed, blocked	Individual studio/workflow gate.
Project	Not started, in progress, waiting approval, completed, delayed, cancelled	Operational project lifecycle.
Task	Not started, in progress, waiting approval, blocked, delayed, completed	Kanban state.
Release	Scheduled, in preparation, submitted, approved, released, delayed, cancelled	Overall release state.
Release phase	Preparation, distribution, marketing, post-release, completed	Sequential release workflow.
Platform	Pending, submitted, live, rejected	Store/distributor delivery.
Metadata	Unvalidated, incomplete, needs review, valid	Data completeness.
Ownership	Complete/incomplete; pending/signed; ready/pending metadata/pending approval/distributed/on hold	Split, signature, and distribution readiness.
Contract	Draft, pending signature, active, expired, terminated, renewed	Legal document lifecycle.
Campaign	Planned, active, paused, completed, cancelled	Marketing campaign lifecycle.
Content	Draft, scheduled, published, cancelled	Content calendar state.
Finance payment	Pending, paid, overdue, cancelled, partial	Transaction settlement state.
Budget	Draft, approved, active, closed	Budget authorization/use.
Royalty	Draft, calculated, approved, paid, disputed	Royalty settlement lifecycle.
Balance	Draft, reconciled, approved	Artist balance control.
Development	Active, completed, paused, archived	Plan lifecycle.
The Lnk Up	Planned, casting, recorded, editing, scheduled, aired, cancelled	Episode production lifecycle.

Priority used across modules: low, medium, high, critical. Critical should be reserved for work that materially threatens a deadline, release, legal right, payment, compliance requirement, or key relationship.

Current-deployment notes

Version 1.2 documents the public landing experience and current login navigation in addition to the operational workflows introduced previously. The table records what is now live and which capabilities still require deployment configuration.

Feature/control	Version 1.2 behavior	Operating note
Public landing page	Signed-out visitors at the root route see a responsive platform introduction with four interactive capability cards.	Use a card, carousel arrow, or desktop arrow key to change the feature story; use Sign in or Enter the platform to continue.
Login Home button	The login page includes a persistent Home control that returns to the public root route.	If already authenticated, opening the root route resolves to the role dashboard.
Workspace search / Ctrl- or Command-K	Live role-aware cross-module results with direct navigation.	Enter at least two characters; module search remains best for detailed filters.
Forgot password	Expiring one-time token and reset form are live.	Production requires <code>FRONTEND_URL</code> and <code>PASSWORD_RESET_WEBHOOK_URL</code> ; without delivery configuration the API reports a service error instead of pretending that mail was sent.
Account provisioning	Staff accounts are created in Team Management; artist credentials are generated when an artist is approved.	There is no public self-registration control on the current login page. Deliver temporary artist credentials through an approved secure channel.
Keep me signed in	Checked uses persistent browser storage; clear uses session storage.	Leave clear on shared devices and always sign out.
Two-factor authentication	Standards-based authenticator setup, verification at login, and password-confirmed disable are live.	Store the setup key securely; losing the authenticator requires administrator password assistance and database-level 2FA recovery.
Appearance	Four themes and three root font sizes apply and persist.	The top-bar button remains a fast light/dark switch.
Platform links	Validated Spotify, Apple Music, and distributor links persist and open in a new tab.	These are launch links, not OAuth connections or automatic data imports.
Weekly Report	Listed in Administrator and Manager navigation with existing read/write authorization.	Use Current Week and History from the module.
Role-safe account pages	All roles can open personal Settings; artist Profile uses the linked own-profile endpoint.	Administrator-only permission/team controls remain hidden from other roles.
Artist personal modules	My Music, My Releases, Royalties, Tasks, and Profile use own-data/scoped endpoints.	They do not expose unrestricted staff catalog or finance records.
Royalty statement	Generated statements open in-app and provide Print / PDF.	Review the record, then use the browser print dialog to save the formatted PDF.

Demo file fixtures	The demo seeder creates real managed PDF, JPEG, WAV, and CSV fixtures with valid protected paths.	For an older seeded database, run <code>npm run demo:repair</code> in <code>backend</code> once; the repair is restricted to IDs recorded in <code>_demomarkers</code> .
Backups	Primary handling is live; cloud and external copies remain configuration-dependent.	Configure mounted <code>CLOUD_BACKUP_PATH</code> and <code>EXTERNAL_BACKUP_PATH</code> , then verify checksums and timestamps.

Change control

Update this manual when routes, permissions, validations, field sets, or placeholder controls change. Record the new version and review date on the document-control page.

Client acceptance checklist

- ☐ Each role can sign in and sees only intended navigation.
- ☐ One complete test artist progresses through onboarding approval.
- ☐ One song completes metadata and ownership validation and enters a release.
- ☐ One finance/royalty/balance period reconciles from source to payment.
- ☐ File upload, protected preview/download, and all configured backup destinations are verified.
- ☐ Administrator can create, deactivate, reset, and safely reassign a test user.
- ☐ Known deployment notes are accepted or scheduled for correction.
